### 120 product range overview

### 124 Five steps to the new door

Door selection and installation

580 employees.  
60 years of experience.  
A family.

Design.  
Quality.  
Both timeless.

### Made in Germany

Over 60 years of experience

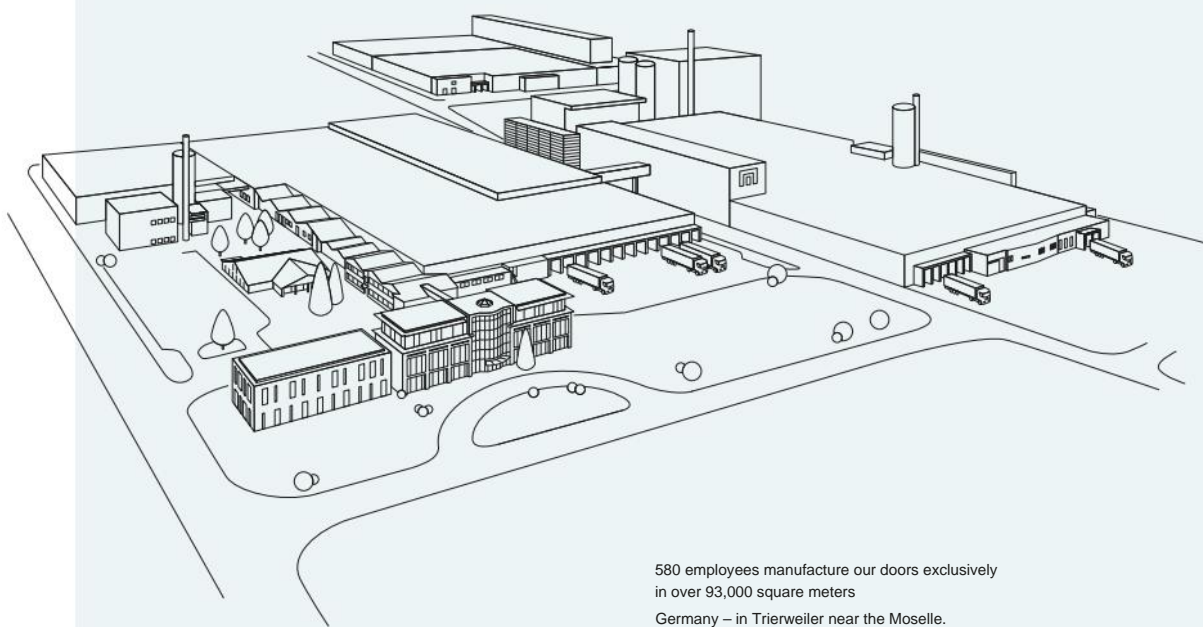

We have been manufacturing doors in Trierweiler near the Moselle for over 60 years. As the newly qualified master carpenters Klaus Borne founded the company in 1956

founded, he quickly concentrated on one product: good doors. Our now grown family business maintains this crystal-clear focus to this day: We value

Simply convincing solutions, clear statements and short routes.

Frank Borne and his sister Margret Borne-Müllerklein now run the family business in the second generation.

580 employees manufacture our doors exclusively in over 93,000 square meters Germany – in Trierweiler near the Moselle.

For us, "good doors" means that design and quality last for many years: the hinges on our doors alone have to pass the endurance test for 100,000 closing cycles.

Our designs continue to set standards: We were the first to develop one of the lightest white tones for doors, which is perfectly coordinated with the best-selling wall colors: Our polar white - much loved by customers and often copied. Both alone are a small award.

#### Easily and quickly assembled

Our frames fit into all common wall openings and are ready for immediate use.

Even after installation, tolerances between the frame and the door leaf can be easily compensated for.

#### Screwed multiple times

The pre-assembled strike plates are fivefold screwed and easily expandable.

#### Closes quietly

Permanently elastic damping profiles ensure that the door closes quietly.

#### Easily shortened

Many of our doors can be shortened at the bottom by up to 50 millimeters. This means that unevenness in the floor can be quickly leveled out.

#### More comfort thanks to tubular span

Better sound insulation and closing comfort – thanks to the standard middle layer made of tubular chippings.

#### Healthy living and environmentally friendly

We use water-based UV varnish that is low in pollutants and emissions and is well below the strict limits.

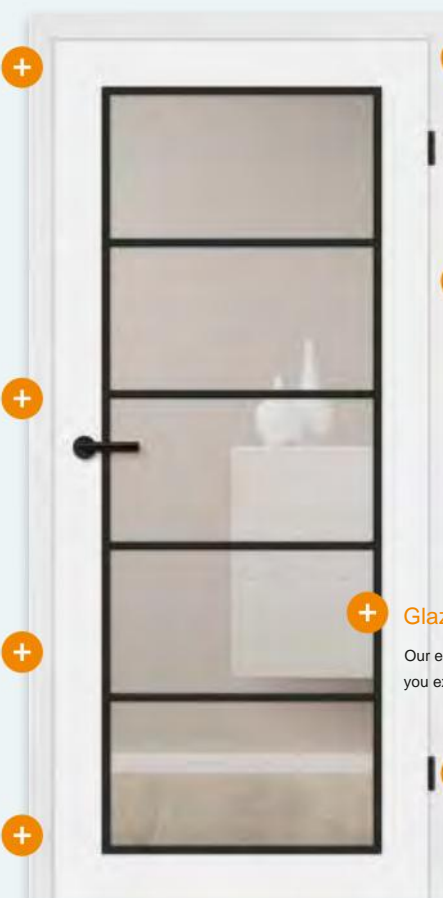

We continually return all paint and wood residues to our production cycle.

#### Glazing by a professional

Our experts install the glazing or lattice frames for you ex works.

#### Maintenance and noise-free belts

No dirt, no squeaking - the belts are designed so that they produce neither metallic abrasion nor noise.

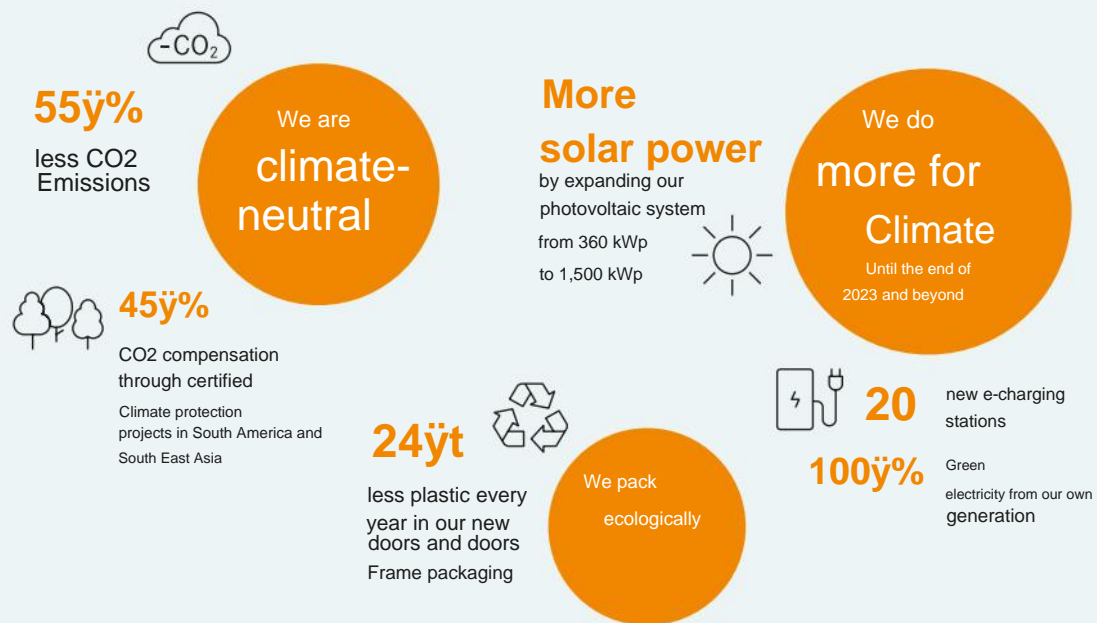

Highest quality.  
Minimal resource consumption.  
No compromise.

**Climate neutral company**

**We are a climate neutral Pursue**

As a family business, we think in terms of generations. That is why climate protection and the responsible use of resources are particularly important to us. As one of the first door manufacturers, we have been certified as a climate-neutral company since 2021.

We were able to offset 55 percent of our emissions through, among other things, our own photovoltaic system and CO<sub>2</sub>-neutral self-supply with green electricity and heat. We fully offset unavoidable emissions: We support several VCS or WWF-certified climate protection projects in South America and Southeast Asia.

We continuously reduce our consumption of resources: we source almost all raw materials and individual parts from Germany - many of them even from the region.

We are gradually converting our car fleet to electric cars with our own charging stations. The wood in our doors comes from sustainably managed forests. We only use water-based paints, free of solvents, whose emission levels are well below the strict limits. We avoid plastic as much as possible and deliver our doors in sturdy cardboard packaging made from recycled materials.

Further information can be found at [www.klimaschutzholzindustrie.de](http://www.klimaschutzholzindustrie.de)

**We do more**

What has been achieved is good – but not good enough. We want to become even more sustainable. Therefore mini-

Short routes.  
Clear contact persons.  
No shrugging of the shoulders.

**Only in specialist shops**

Be sure to get advice and order

We want to make your door purchase as comfortable and safe as possible: Choose the door you want from the comfort of your own home. You can then send your selection directly to the nearest specialist retailer via our website - we know the experts at your location. Mosel doors are only available from qualified specialist retailers. The on-site professional guarantees competent advice right up to the end.

**Choose doors online at [www.mosel-tueren.de](http://www.mosel-tueren.de) – get reliable advice and order from specialist retailers**

## Mosel doors – ecology

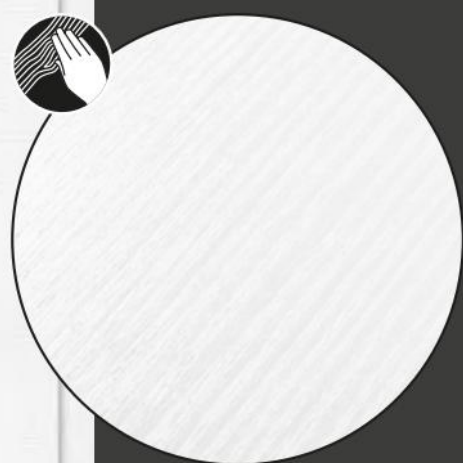

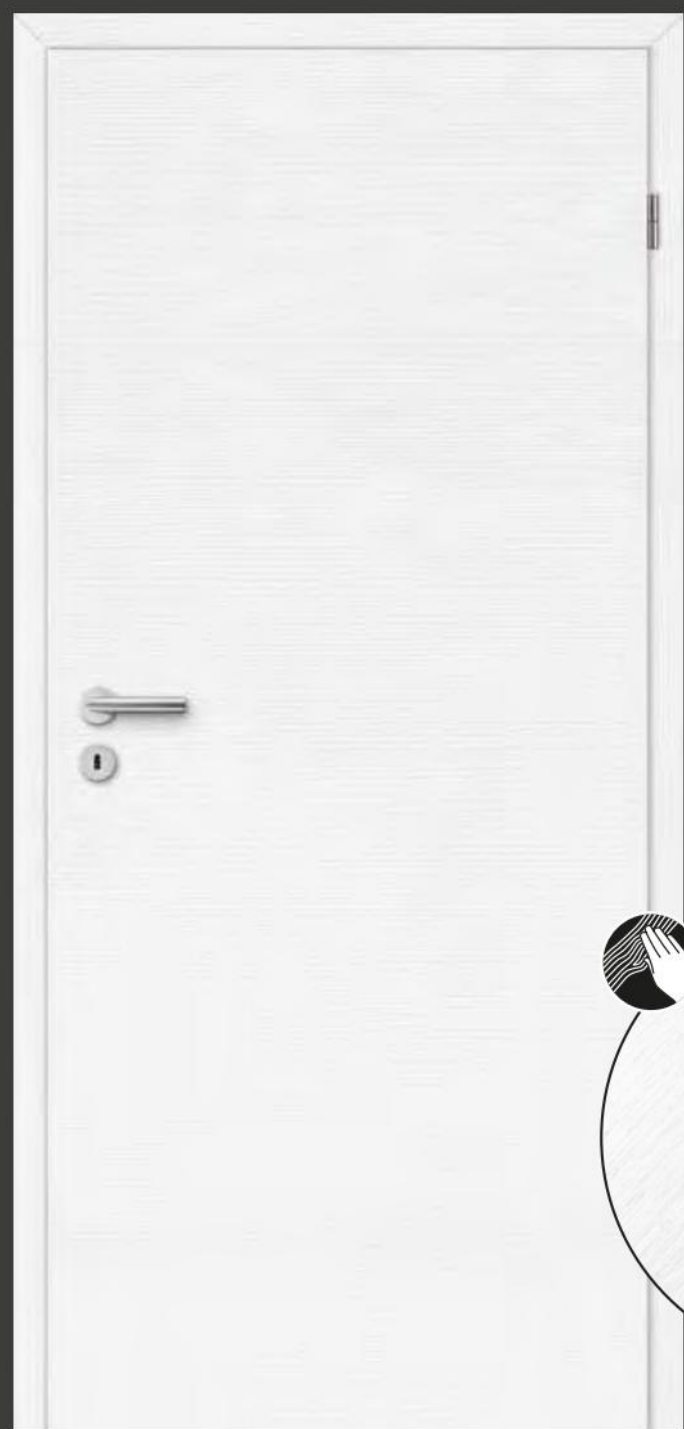

The wood in our doors comes from sustainably managed forests. Almost all raw materials and We source individual parts from Germany – lots of them some of them even from our region. We only use water-based paints that are solvent-free. With our photovoltaic system and our wood-fired power plant, we achieve a completely CO2-neutral self-supply of green electricity and heat. We even feed the surplus into the surrounding network.

# functions and Extensions

Functions such as sound, heat, burglary, fire and smoke protection adapt your door to specific locations.

With extensions you can turn your door into a vestibule, a sliding door or a double-leaf door.

## Functions 104

- Soundproofing 104
- Thermal protection 105
- Burglary protection 106
- Fire protection 108
- Smoke protection 109

## Extensions 110

- Wind catches 110
- Double-leaf doors 112
- Sliding doors 114
- Glazing 116

## Soundproofing

Soundproof doors reduce sound by 32, 37 or 42 decibels. We reinforce the door leaf and integrate a lowerable floor seal. The seal lowers automatically as soon as the door is closed, further reducing noise.

Choose from three packages according to sound insulation classes 1 to 3.

### Available for:

Natural white doors  
Polar white doors  
Lava gray doors  
Wooden design doors

## heat protection

Doors with thermal insulation insulate areas with high temperature differences. The door leaf is so stable that it hardly bends according to the strict RAL quality criteria.

### Available for:

Smooth natural white doors  
Smooth polar white doors  
Smooth lava gray doors  
Wooden design doors

### Soundproofing

#### Start

Sound insulation 32 dB Rw,P

**For:** apartment entrance,  
Stairwell, hallway, corridor

Sound insulation class 1,  
Climate class III,  
Stress group S

Available with light cutout and  
soundproof glazing

### Soundproofing

#### Plus

Sound insulation 37 dB Rw,P

**For:** classrooms,  
Hotel room

Sound insulation class 2,  
Climate class III,  
Stress group S

Available with light cutout and  
soundproof glazing

### Soundproofing

#### Premium

Sound insulation 42 dB Rw,P

**For:** consultation room

Sound insulation class 3,  
Climate class III,  
Stress group S

### heat protection

Isolation of temperature differences from 3 to  
23 °C

**For:** Attic or basement entrance

Thermal  
protection: only door leaf UP 0.82 W/m<sup>2</sup> K,  
Türelement UD 1.1 W/m<sup>2</sup> K  
Climate class III,  
Stress group S

Doors with sound insulation  
Packages **Start** and **Plus** are  
Even available with light cutout  
and soundproof glazing.

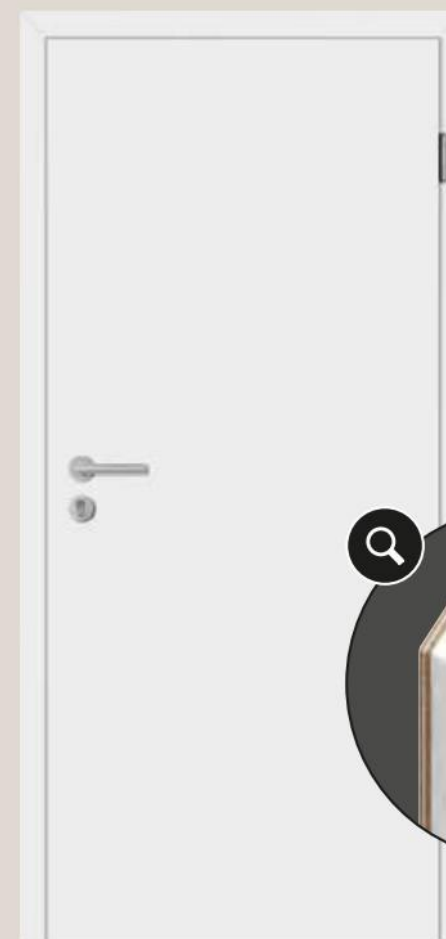

As soon as the door is closed, the  
floor seal automatically lowers. This  
also reduces the noise.

Band page

Schlossseite

We manufacture doors with a thermal  
insulation package with a stable  
middle layer made of EPS rigid foam.  
This allows you to achieve the best  
possible insulation.

## Burglary protection

Doors with burglary protection make it more difficult for opportunists to break open the door using simple tools. We reinforce the door leaf and the anchoring of the frame and wall. You can also use the door as an apartment entrance door. Choose from two packages with a single or triple lock.

### Available for:

Natural white doors  
Polar white doors  
Lava gray doors  
Wooden design doors

### Burglary protection

#### Start

Resistance class RC2  
with single locking and  
Sound insulation with 32 dB Rw,P

**For:** Closing the apartment

Climate class III,  
stress group E,  
Sound insulation class 1

### Burglary protection

#### Plus

Resistance class RC2  
with triple locking and  
Sound insulation with 32 dB Rw,P

**For:** Closing the apartment

Climate class III,  
stress group E,  
Sound insulation class 1

### Elegance doors with Burglary protection

Only with us: Design

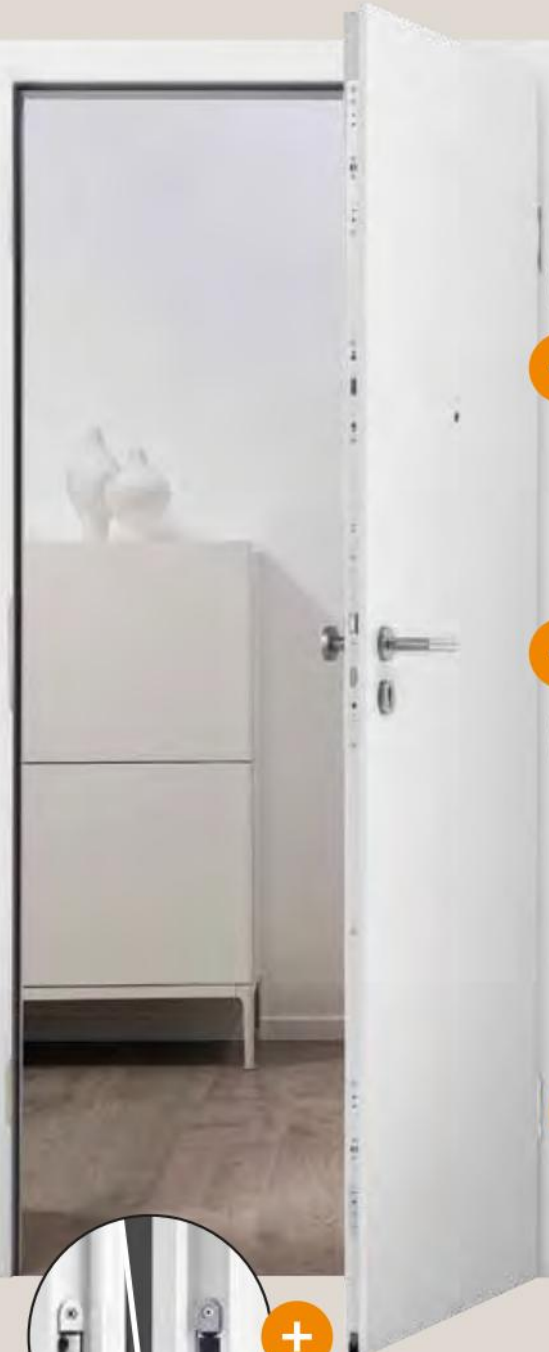

With an Elegance style door  
you can also complete your  
apartment.

The two secondary locking  
Sheets of the optional  
triple locking system  
additionally secure the door at  
the top and bottom.

The safety lock  
sheet metal is fixed with the  
door frame and the wall  
screwed. The door  
This makes it difficult  
break up more quickly.

The door viewer gives you  
an almost 180 degree  
view of the hallway.

The lock is  
particularly reinforced.

The three-part security  
straps are firmly attached  
connected to the door leaf  
and don't let themselves  
lever out.

The floor seal insulates  
against cold and noise. Ideal  
for closing your apartment.

Hinge side lock side

## Fire protection

Fire rated doors keep areas free of smoke and fire for at least 30 minutes. All doors are equipped with a scissor arm closer as standard - this automatically closes the door. Alternatively, we also offer other closer variants.

**Available for:**

- Natural white doors
- Polar white doors
- Lava gray doors
- Wooden design doors

## Smoke protection

Doors with smoke protection prevent the spread of smoke gases. Even after 200,000 closing cycles, the so-called leak rate of 20 cubic meters per hour must not be exceeded according to strict testing standards.

Smoke protection doors are equipped with a scissor arm closer as standard. Alternatively, we also offer other closer variants.

**Available for:**

- Natural white doors
- Polar white doors
- Lava gray doors
- Wooden design doors

### Fire protection

Fire and smoke protection for at least 30 minutes

**For:** Areas where fire retardant Fire protection is required

# Five steps to the new door

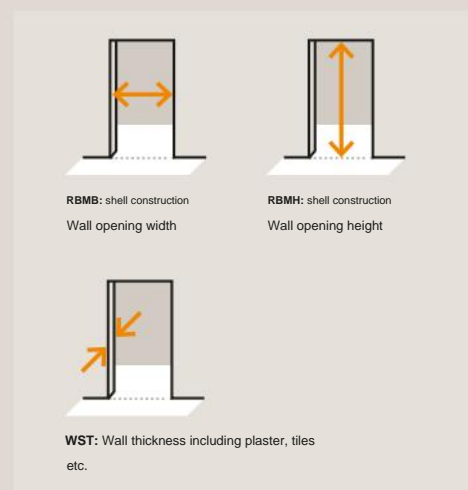

## Determine door dimensions and hinge direction

### Option one – new building:

#### Measure height, width and wall thickness

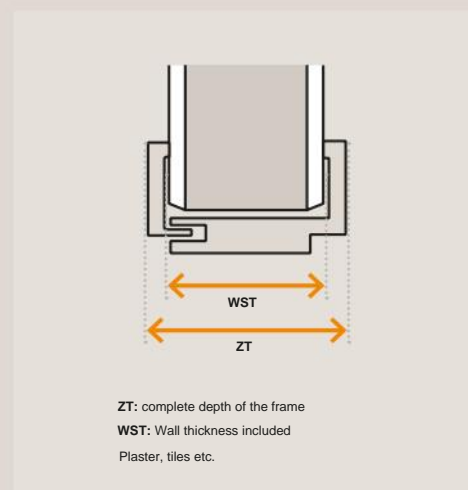

The wall opening determines the size of the door leaf and frame. Please measure the height, width and wall thickness of the wall opening. So that you can detect unevenness directly, please always measure in at least three places. The largest measured value of the wall thickness defines the dimension; for the wall opening it is the smallest value. Attention: A construction drawing does not yet show the final wall thickness. Therefore, always measure the finished wall including plaster or tiles and floor coverings.

### Option two – renovation:

#### Measure your old door

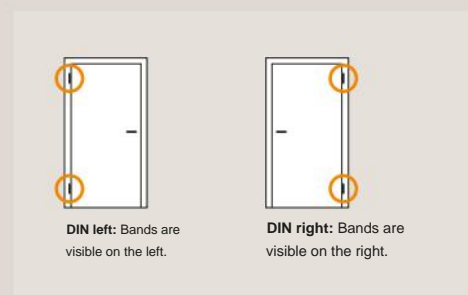

If you don't want to change anything on the floor or wall, simply measure the width and height of the old door leaf. Then measure the complete depth of the frame. Then subtract the thickness of the frame cladding on the front and back - this means you have defined the wall thickness. Doors can often be replaced without renovation work such as wallpapering or painting. Look at the table on the next page: If that

If the external frame dimensions of your new door are at least two centimeters wider than the current frame, you generally do not need to re-paper.

### Determine the direction of attack

Which side should your door open to? The hinge direction defines on which side the door is connected to the frame.

### Dimensions for natural white doors, polar white doors, lava gray doors and wooden design doors

(all dimensions in millimeters)

		Wall opening (min.–max.)	Door leaf external dimensions	Frame rebate dimension	Lining plate external dimensions	External frame dimensions At 60/70mm Clothing width
<b>Dimensions for single leaf Doors</b>	Width	625–665	610	591	613	711/731
		750–790	735	716	738	836/856
		875–915	860	841	863	961/981
		1000–1040	985	966	988	1086/1106
Height		2000–2025	1985	1983	1994	2043/2053
		2125–2150	2110	2108	2119	2168/2178
<b>Total door width</b>						
<b>Dimensions for double-leaf Doors</b>	Width	1225–1260	2x610	1210	1191	1311/1331
		1475–1510	2x735	1460	1441	1561/1581
		1725–1760	2x860	1710	1691	1811/1831
		1975–2010	2x985	1960	1941	2061/2081
Height		2000–2025	1985	1983	1994	2043/2053
		2125–2150	2110	2108	2119	2168/2178

For some functional doors such as sliding or security doors or glass doors, there are special aspects to consider during installation. Your specialist dealer can give you special information on this.

### Dimensions for glass doors and sliding glass doors

(all dimensions in millimeters)

		Wall opening (min.–max.)	Door leaf external dimensions	Frame rebate dimension	Lining plate external dimensions	External frame dimensions At 60/70mm Clothing width
<b>Dimensions for single-winged Glass doors</b>	Width	750–790	709	716	738	836/856
		875–915	834	841	863	961/981
		1000–1040	959	966	988	1086/1106
	Height	2000–2025	1972	1983	1994	2043/2053
	2125–2150	2097	2108	2119	2168/2178	
<b>Dimensions for double-leaf Glass doors</b>	Width	1475–1510	2x709	1429	1451	1571/1591
		1725–1760	2x834	1679	1701	1799/1819
		1975–2010	2x959	1929	1951	2049/2069
	Height	2000–2025	1972	1983	1994	2043/2053
	2125–2150	2097	2108	2119	2168/2178	
<b>Rail length</b>						
<b>Dimensions for infl. Sliding glass door</b>	Width	715–810	850	2000		
		815–910	950	2000		
		915–1010	1050	2200		
Running in front of the wall	Height	1970–2010	2030			
		2090–2130	2155			

All dimensions here are for a shell wall opening. The wall only needs to be caulked slightly at the height of the hinge pockets if the wall opening has the minimum dimension.

## Choose door design

### Adjustment range of the frames

According to wall thickness

Mosel standard frame for the following wall thicknesses in mm	80	100	120	140	160	180	200	220	240	265	280	300	330
	80-97	100-117	120-137	140-157	160-177	180-197	200-217	220-237	240-257	265-282	280-297	300-317	330-347

Without gluing: adjustment range +17 millimeters (from-to).

Frame for the following wall thicknesses in mm	350	370	390	410	430	450
	350-367	370-387	390-407	410-427	430-447	450-467

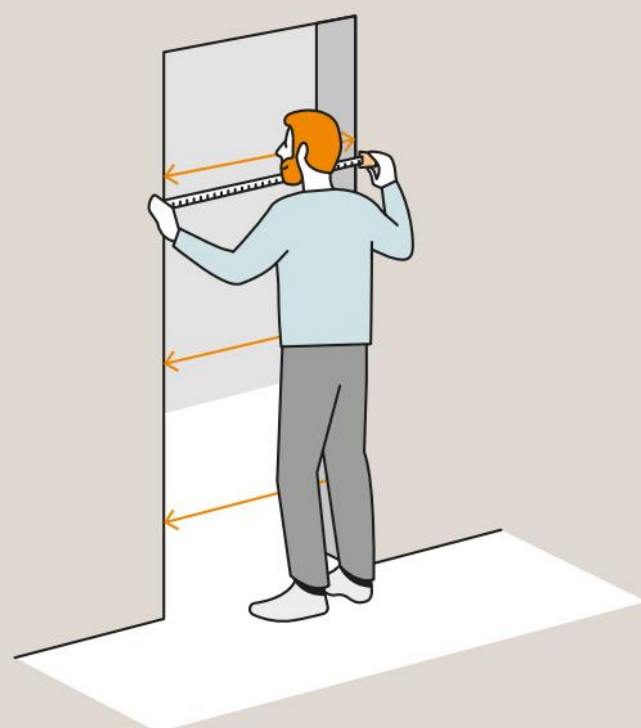

Without gluing: adjustment range +17 millimeters (from-to).

### Dimensions for double-shell frames

According to wall thickness

Wall thickness in mm	470	490	510	530	550	570	590	610	630	650
feed	220	240	260	280	300	280	300	265	290	310
flees	10	10	10	10	10	10	10	15	10	10
Passage lining (Dufu)	240	240	240	240	240	280	280	330	330	330
Adjustment range	465-485	485-505	505-525	525-545	545-565	565-585	585-605	605-625	625-645	645-665

The adjustment range can be extended by an additional +10 mm via a larger visible gap by not completely pushing in the connecting springs.

### Choose design and surface

So that you can quickly find your desired design, we sort our collections according to designs such as smooth doors, style doors or upright grained wooden design doors. Each door collection is manufactured with a specific surface: either elegant lacquer, a robust CPL coating or made entirely of glass. The properties and differences can be found here.

#### Natural white, polar white and lava gray doors

##### Paint – natural white, polar white, lava gray

All painted doors receive a more

layered paint application. We only use water-based paints. They are

UV-cured, solvent-free and certified low-emission.

Natural white doors go well with tinted, warm interiors.

We have our exclusive polar white on

the best-selling, bright white wall colors.

##### CPL – natural or polar white

Doors with a CPL surface are special

robust and easy to care for. The specially hardened laminate coating makes the door

insensitive to scratches, impacts, moisture and dirt. Natural white doors go well with tinted, warm

interiors. Our exclusive polar

We have white on the best-selling ones

bright white wall colors and plug-in

cans and radiators coordinated.

#### Wooden design doors

##### CPL

Doors with a CPL surface are particularly robust

and easy to clean. The specially hardened

laminate coating makes the door robust against

scratches, impacts, moisture and dirt. Our CPL

wood designs are additionally refined with

a noticeable wood grain.

#### Glass doors

##### Patterns and structures

The glass doors are designed with geometric

patterns or organic structures. The designs are

noticeably incorporated on one side. We

manufacture all glass doors from eight millimeter

thick safety glass. This is more shock and impact

resistant than normal flat glass.

##### Satin designer glass doors

The glass doors are finished on one side with

satin-finished, geometric designs.

We seal the designs with a nano grip

protector. This makes it easier to remove grip

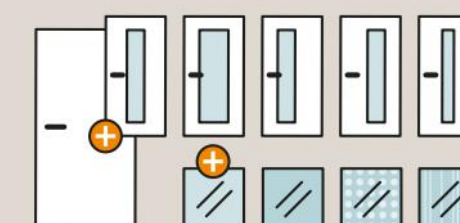

marks. We manufacture all glass doors from

eight millimeter thick safety glass. This is more

shock and impact resistant than normal flat glass.

#### Extra: Select light cutouts

All natural white, polar white, lava gray and wooden design doors are also available with a variety of light cutouts and glass types. In each collection we show you the available light cutouts.

## Plan functions and extensions

### Select functions

Kitchen, children's room, apartment entrance, study... certain room situations require special functions. These make the door leaf safer against break-in attempts or more resistant to fire and smoke. Choose from perfectly preconfigured packages with: sound, smoke, fire, burglary or thermal protection. This catalog offers simple decision-making aids when choosing the right package. Your specialist dealer will also be happy to advise you.

### Choose extensions

With an extension you can turn your door into a vestibule, a sliding door or a double-leaf door. Vestibules minimize heat loss, drafts and noise levels between living areas.

Sliding doors disappear into or in front of the wall to save space and do not protrude into the room. We recommend consulting with your specialist dealer to ensure that measurements and installation are carried out safely.

## Get advice and order

Our doors are only available from qualified specialist retailers. Only the on-site professional guarantees competent advice, arranges an optional installation service and remains your permanent contact throughout the entire purchasing process. Have you followed steps one to three? Great, then all your specialist dealer needs is this information:

**Step 1:** Dimensions of the wall opening, wall thickness and direction of attack

**Step 2:** Your desired door design and any Light cutouts

**Step 3:** Optional features such as soundproofing or extensions such as sliding doors

## Deliver and optionally have it assembled

### Have it delivered quickly

We deliver many doors quickly from stock to your specialist dealer. For doors with light cutouts we need a little more time. After placing your order, your specialist retailer will inform you about the planned delivery date.

### Can be installed as an option

Your specialist dealer will be happy to arrange an optional on-site assembly service for you. So you are on the safe side and enjoy the advantages of professional installation. The professionals also support renovations and remove old frames from the wall opening. In many cases, frames can be replaced without wallpapering or painting.

**Please note:** With painted elements, despite careful execution, minor differences in color, level of gloss and surface appearance between the door leaf and the frame coated with a film are possible. The miter may be visible as a hairline on all ready-to-assemble frames. The name CPL in connection with a type of wood refers to photographic wood reproductions. When printing this catalogue, we carefully coordinated all colors and forms of representation with our products. However, it cannot be ruled out that colors may differ from the original product. The situation is similar with our glasses, which can look different depending on the background, structure, color, satin finish and transparency. For doors that are given a special factory size, we reserve the right to produce them with a high-quality spray paint finish. This also applies to the CPL natural white and CPL polar white surfaces.

Technical changes and errors reserved!

**If you have any further questions,** we recommend that you seek expert advice from your Mosel Doors specialist dealer. All information in this catalog has been carefully checked, but the entire content is not legally binding. We thank you for your trust and hope you enjoy your Mosel doors.
